

GOLD STICK

NATURAL STICKING/ DISPERSING AGENT

GOLD STICK

NATURAL STICKING/ DISPERSING AGENT

It is a very good sticking, dispersing and a spreading agent to increase the efficacy of the foliar applied materials by minimizing the losses during application. It makes to permeate more solutions into the cells of plant tissues thereby increases the **USE EFFICIENCY** of the materials sprayed.

- ❖ It prevents the sprayed materials washing out during rains.
- ❖ It makes the spray fluid particle to spread on the surface of the leaf (acts against surface tension), thereby decreasing the quantity of the spray fluid and the full benefits of the sprayed material can be achieved.

Recommended Dosage:

1.0/ml per 1.0 liter
of the spray fluid.
